

Family ULTRASCAN

Product Partial Discharge Monitors

Description Earth Shield - Panel Mount

Part Number 314.XXX.XXX

Variants .

For investigations where there is no obvious access to switchgear the 'Earth Shield' provides a continuity of earth plane whilst allowing ultrasonic frequencies to pass through the panel. The ultrasonic microphone is mounted inside the shield and secured with a grub screw. These shields are commonly used for permanent installations at the main cable entry point of the switch gear (normally where the 'Y' splice or 'crutch' cable is seen). The component is aluminium and requires pre-drilling of the switchboard prior to mounting.
